

BusinessGuard

business and IT certainty. now.

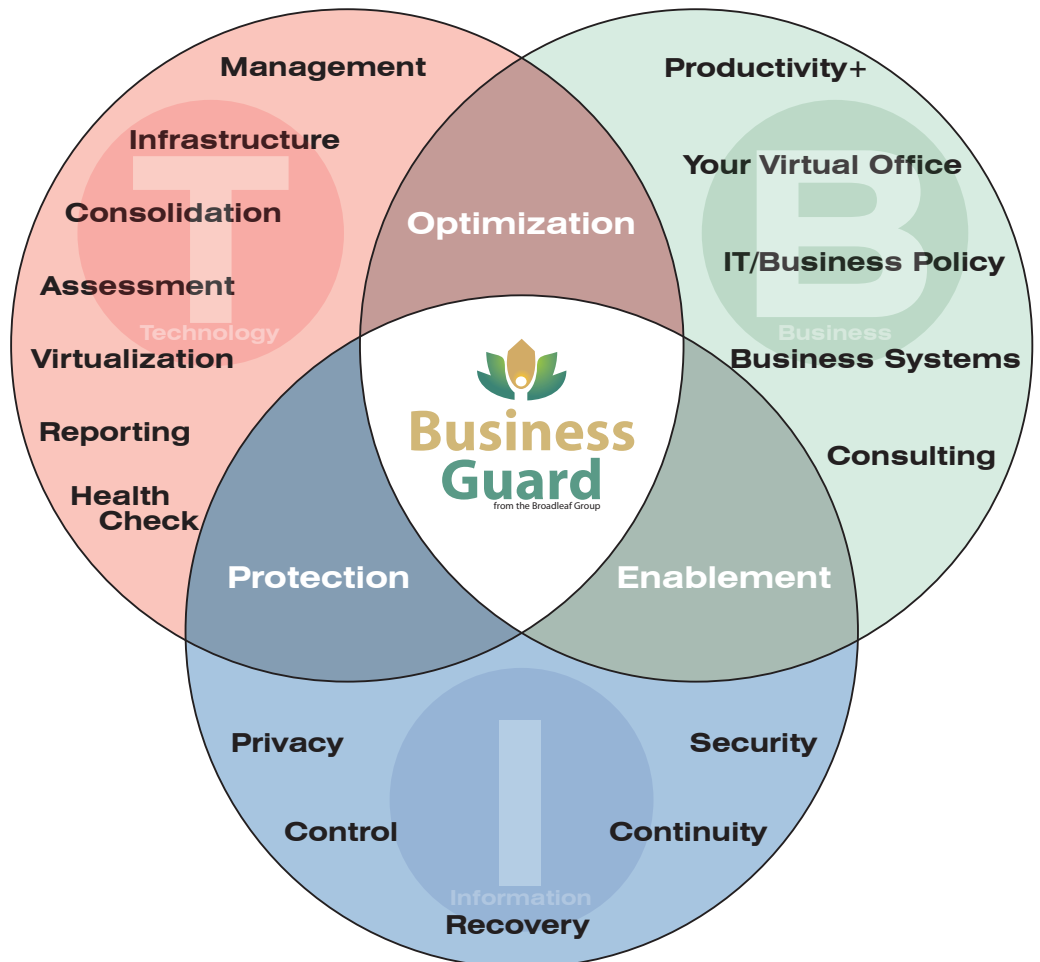

Business and IT live in a very uncertain world. Internal and external threats from hackers, criminals, and disgruntled employees threaten the viability of business and government. Information and identity thefts, or compromises, directly impact brand and customer experience. Operating systems and applications present security and performance vulnerabilities that slow business down while increasing the cost of IT. And, the ever increasing regulatory climate has created uncertainty for business and IT leaders.

To combat these issues, IT and business undertake projects which often run over time and budget - thereby creating more complexity and confusion and, often, leading to a greater risk to the business.

The Broadleaf Group changes all that through BusinessGuard.

BusinessGuard is a unique, value-add Broadleaf Group offering. No other IT-related business offers this solution to solve three of the biggest IT/business needs: security, performance, and compliance. No other solution matches BusinessGuard for its benefits, speed, accuracy, and ability to improve an organizations Business Enablement, Information Protection, and Technology Optimization. Anything short of BusinessGuard and you may be compromising project success.
